1988 (SIXTY-THIRD) SPRING OCCURRENCE REPORT

Three hundred and six species (plus the possibilities that the Accipiter and Empidonax species were ones that were not listed, and that a Louisiana Waterthrush was recorded in Nebraska) are listed in this report, from 15 locations, plus 13 "spot check" columns involving 34 counties. In 1987 there were 288 species from 13 locations and 6 "spot check" columns involving 9 counties; 1986 304 from 13 locations and 9 "spot check" columns involving 24 counties; 1985 296 from 13 locations and 9 "spot check" columns (plus additions on *NBR* 53: 70) involving 22 counties; and in 1984 293 from 12 locations and a "spot check" column involving one county.

The "spot check" columns are for the most part for infrequent visits to an area, though in a few cases they are fairly frequent, so that the whole half year isn't covered. The average reader can just take the symbols in these columns as indications that the species was present; those who want to know when and in which county can get that information from the symbols, which are given separately for each column. The symbols have different significance

in each column.

The symbols of general significance are:

Ja, Fe, Mr, Ap, My and Je for the months,

NR for a species probably present but for which no records were made,

P to indicate a species which is present all of the year, although the same individuals may not be present during the whole year, and the numbers may vary greatly,

(p) for probable permanent species for which reports were not spread over the whole period,

- S to indicate the species remained after 30 June, but the lack of such indication does not necessarily mean the species did not remain,

W - S to indicate a species which arrived before 1 January and stayed after 30 June. It is similar to P, but the pattern is not always true,

W - to indicate the species was present before 1 January,

x and a month indicator when the exact date in the month was not provided,

* to indicate a comment in the text.

The number of species reported, contributors (to the extent known), and special comments are (spot check columns given first):

A, 36 species, Box Butte (B) and Sheridan (S). a = My 20 to 22 (S), by Rick Wright; b = My 30 (B) by Mark

Brogie; c = My 27 to 30 (S) by Mark Brogie; x = My 20, y = My 22, and z = later (S), by Doug Thomas, and A = b + c. Doug Thomas first saw the Eared Grebe on a nest with three eggs, and made several visits later (but did not keep track of the dates) and last saw a pair with three chicks.

B, 57 species, Cherry (C), Grant (G), Hooker (H), and Thomas (T), a = Fe 7 and 8 (H) by Mrs. Billie Gerber, b = My 19 and 20 (T) by Rick Wright, c = My 27 (C), d = My 30 (G), e = My 30 (H), f = My 19 and 30 (T) all by Mark Brogie, x = My 21 (G) by Lee Morris, z = Je 25 by Ruth Green, just west of Whitman, A = c + d, and B = c + z. Mr. Morris saw the Swainson's Hawk on a nest "west of Hyannis". He added "also seen in the same general area at several points along the road" (N 2) "were a great number of Black-necked Stilts. This was by far the most Black-necked Stilts I have ever seen in one area". Mr. Morris did not remember just how far west of Hyannis these sightings were, and it is possible that the Stilts, at least, should be in column A. The Whooping Crane information is given under Notes.

Ch for Chase, 64 species. a = records in the last part of June, after Mrs. Iola Pennington got back from Texas. She saw 11 Turkey Vultures on posts by the Stinking Water River. She did not record the Long-billed Curlew herself, but included it on the word of a ranch wife. Mourning Doves are the most numerous bird. Burrowing Owls are very scarce this year; prairie dogs are being

Gertrude Wood. A Downy Woodpecker banded in Cass Co. this spring had been banded in Fontenelle Forest, Sarpy Co., two years before, which was also true of a White-breasted Nuthatch, and another Nuthatch had been banded two years ago near Schramm State Park, also in Sarpy Co. but about 25 miles from the Forest.

Cedar, see H.

Cherry, see B.

Cuming, see J.

Dakota, South

Sioux City, 168 species, Bill Huser, reporter, Mark Brogie, Jerry Probst, Dave and Lois Stage. After the Ja 1 record Mourning Doves were not recorded again until Ap 6.

Dawes, Crawford, 83 species, Jim Minyard, reporter, Mark Brogie (My 27-30), Rick Wright (My 20-21). Birds shown with only May dates are not necessarily migrant or just summer birds, since Mr. Brogie and Mr. Wright covered parts of the county not covered by Mr. Minyard.

Dawson, see D.

Dixon, see H.

Douglas (and Sarpy), Omaha and Bellevue, 220 species, plus 4 marked °, Tanya Bray, R. G. Cortelyou, Ruth Green, and Babs and Loren Padelford, reporters, Russ Benedict, Duane Bright, Alan Grenon, Clyde and Emma Johnson, Ray Korpi, Alice Rushton, Ione Wethman, and Rick Wright. ° marks species reported on the Spring Count, which used the Christmas Count area, which includes parts of Iowa; it was not practical to try to reconstruct the count to eliminate birds seen only in Iowa (except, unfortunately, the Scissor-tailed Flycatcher, which was unusual enough to leave no doubt that it was seen in Iowa). The

Cattle Egrets were seen "about two weeks before" My 27. Snow Geese seen as late as Ap 8 were free-flying, but might be being fed. Two small, sleeping ducks with cocked tails seen My 9 may have been Ruddies. A Sora was coming morning and night to a feeder in west Omaha My 28, and probably later. Information on the Least Terns is given under Notes. The two Say's Phoebes were seen in Fontenelle Forest in the afternoon, and not again. An immature Dickcissel was coming to a feeder in Bellevue in the middle of January. There were 3,000 to 4,000 birds in the Longspur flock, in southern Sarpy Co. Western Douglas Co. was not well covered this year, and in particular the Bobolinks probably arrived earlier and stayed later than shown.

Johnson, Paul and Karla Kaufman, Thomas E. Labedz, Mabel B. Ott, Babs and Loren Padel-ford, reporters, Esther V. Bennett, Mark Brogie, John Dinan, Alan Grenon, Rick Wright. There were mallard-sized Canada Geese at Holmes Lake Ja 16 to Ap 23. They came and went with a flock of large Canadas. Rick Wright reported a Scaup sp. Ja 1. There were two sightings of the Bar-row's Goldeneye - one at Branched Oak Lake and one at Wagon Train Lake. The first was alone, with no other water birds in the area; the second was by itself, but a mixed flock of other ducks was near. Dr. Johnson noted that both birds seemed to have their feathers rather ruffled, in contrast to the sleek look of the Com-mon Goldeneyes she had been seeing. The Least Terns are covered under Notes. John Dinan re-ported Barn-Owls nesting near Lincoln. Mr 18 Larry Einemann saw Pine Siskins carrying nesting material to a Norway spruce, and on Mr 25 he saw a Siskin on the nest. He last saw Siskins in Lincoln on My 19. The Baird's Sparrows are covered under Notes. Lincoln, North Platte, 130 species, Mrs. A. B. Gunlicks, reporter, Harold Cunningham, Erma Grill, Greg Hoover, Pat McEvoy, Margaret Morton, Esther Newhouse, Carol Somerhalder, Howard and Wilma Wyman. The Swans were reported on page 46 of the June issue. A report on Whooping Cranes in adjacent Per-kins Co. is under Notes, Loup, see C. McPherson, Tryon, 34 species, Mrs. Oona Bassett, reporter. Mrs. Bassett spends the winter

in Arizona, and My 17 is the earliest date reported, so winter birds and early migrants are not included. She noted that the Blue Jay was new there.

Madison, see G. Morrill, see Scotts Bluff.

Pawnee, see Pa, page 63.

Perkins, see Lincoln.

Phelps, see D.

Pierce, Pierce, 148 species, Mark A. Brogie and Larry D. Roper, reporters.

Polk, Polk, 143 species, Norris Alfred, reporter, Mark Brogie, Daryl and Margaret Giblin, Dick Gustafson, Lennis Lind, Barbara Lucas, Lee, Shirley, and Steve Morris, A Great Blue Heron was seen Ja 16; a Green-winged Teal was seen Je 15; a Gadwall Ja 9; a Turkey Vulture Fe 14; and a Northern Harrier Ap 24. No Lesser Scaup were recorded between Mr 8 and Ap 24. Mr. Morris commented that the Buff-breasted Sandpipers arrived late this year, and probably were there after My 20, when he left for the Annual Meeting. A possible Herring Gull was seen Ap 14; a Magpie was seen My 29; a Brown Thrasher on Fe 7; Bobolinks were recorded before My 29, but date not specified; there was a gap in observations of Yellow-headed Blackbirds from Ap 24 to Je 26; and Purple Finches were seen before Ja 17, again date not given.

Rock, see see C.

Sarpy, see Douglas.

Scotts Bluff, Ger- ing, 170 species, plus Empidonax sp. and Oporornis sp., Alice Kenitz, reporter, Joyce Brashear, Lydia Bolz, Felix and Lucy Koenig, Bob

mile south of where they had been seen during the Annual Meeting, and on Jl 30 Mrs. Kenitz saw several about half a mile south of the Je 21 sighting, which raises the possibility that they nested in the Wildcat Hills this summer. During the Annual Meeting Wayne Mollhoff saw a Red-breasted Nuthatch fly from a hole in a dead stump. Lynne Vacanti tried to reach into the hole and found it was sticky all around the hole. Harrison's *Field Guide to Birds' Nests* states: "All nuthatches perform some sort of nest entrance modification. The Red-breasted dabs globules of pitch around hole; this may prevent insects, small mammals, or other birds from entering. To avoid pitch, female entering cavity generally flies straight in. Dead body of nuthatch has been found stuck to entrance hole in pitch." It also mentions that both male and female smear the pitch, and they continue to do this throughout the nesting period. There were about 1,000 birds in the Bohemian Waxwing flock at first.

Seward, see I.
 Sheridan, see A.
 Sherman, see F.
 Sioux, Mitchell, 169 species, Helen and David Hughson, Tanya Bray, Mark Brogie, Alice Kenitz, Rick Wright. The comment for Dawes Co. about May dates also applies here. The Great Egret was seen at University Lake by Bob Larkin, Alice Kenitz, Bob Kruger, Lynne Vacanti, and Nora Mae Vance, The bird, a little smaller than a Great Blue Heron, flew in a large arc on one side of the party, and they could see the all white plumage, light-colored bill, black feet and legs. The Black-necked Stilt
